- Lower costs to change and adapt your automated processes
- Lower costs associated with upgrading to new Adempiere releases
- Lower costs for every transaction
- Higher inventory turns and fewer stock-outs
- Better control over suppliers and costs
- Faster access to information for decision-making
- Faster period close cycles for generating financial statements
- Improved customer responsiveness
- Ultimately, revenue and profit growth

Adempiere ERP – Enterprise Resource Planning

Adempiere is a community driven project which develops and supports an open source business solution of the same name, that delivers Enterprise Resource Planning, Customer Relationship Management and Supply Chain Management functionality. The Adempiere project was created in September 2006 and its name comes from the Italian word meaning 'to fulfill' but with additional context of "to complete, reach, practice, perform the duties of, or free (discharge), it also means to honor and respect", which was felt was very appropriate to what the project wished to achieve.

ADempiere is an industry strength solution that combines ERP, CRM and SCM support for business processes. As opposed to the so called "World Class" ERP solutions, ADempiere (originally based on Compiere®) was designed for the globalized world. While the current incumbent World Class ERP's had to build layers on top of the core product in order to provide support for multiple languages, currencies, companies, etc., ADempiere had them embedded from the original design.

Adempiere is an integrated ERP and CRM solution built on a powerful Model-driven Application Platform, that gives you the capabilities to run YOUR business, YOUR way. Use Adempiere to automate all of your financial, distribution, sales and service processes... quickly, affordably and easily.

As an Open Source product, Adempiere software source code is available to you and to the broader Open Source community. It can never be bought or merged out of existence. Your Adempiere investment will last as long as you want it to.

Because of its open architecture and adherence to open standards, Adempiere gives you many choices. Beginning with initial deployment and continuing into the future, you have the ability to add new features and extend Adempiere to meet your changing business needs.

- Projects - Project management, planning and execution. Track costs associated with multi-phase projects.

Why Adempiere? We choose Adempiere, making it the Open Source ERP/CRM/SCM of choice:

- Truly stable, high performance, flexible, easy to use, facility of maintenance and scalability in the product application
- Expanding functionality footprint to be on par to other world class ERP solutions
- Technological jump from a client-server to a more modern, N-tier application
- User Interface which is easy to use, intuitive, attractive and well organized
- Collaboration of a real community where it is possible to integrate everyone's contributions and catalyse further development
- Tools to test, upgrade, migrate and apply bug corrections or source improvements
- Use of state-of-the-art open source tools
- To improve the product, based on the global user-community covering a myriad of verticals
- 100% Open Source, free of license supported by Open Documentation, Open Support and a not-for-profit ADempiere Council

Adempiere ERP, CRM & SCM

ADempiere is an industry strength solution that combines ERP, CRM and SCM support for business processes. As opposed to the so called "World Class" ERP solutions, ADempiere (originally based on Compiere®) was designed for the globalized world. While the current incumbent World Class ERP's had to build layers on top of the core product in order to provide support for multiple languages, currencies, companies, etc., ADempiere had them embedded from the original design.

ADempiere scalable architecture makes it viable for deployments of just a few localized users or thousands distributed across the world. ADempiere functionality is designed around business processes rather than inflexible modules.

The following business areas are addressed by the ADempiere business processes

- * Enterprise Resource Planning (ERP)
- * Supply Chain Management (SCM)
- * Customer Relationship Management (CRM)
- * Financial Performance Analysis
- * Integrated Point of sale (POS) solution
- * Integrated Web Store
